

We are Proud to Announce...
Global Positioning System TRACKING

We offer complete GPS operations, equipment lease and GPS monitoring services.

Imagine the ability to locate your vehicle simply by bringing up a search application on your smart phone. Track delivery vehicles, “keep good employees honest” by installing GPS equipment in the fleet or discreetly using it to sort out the trouble without making “group law” that affects all.

GPS monitoring can capture several categories of data such as vehicle speed, braking, fuel economy, locations, ignition on/off and more. Consider it for streamlining fleet operations making known locations available for the best alternative route to supply a last minute customer. GPS tracking can answer your questions about the driving practices, locations traveled to and current location of your teen driver. No more waiting up to see where they’ve been. Off limits locations can be “GEO Fenced” and whenever the vehicle enters the fenced area, an e-mail or text alert can be sent to notify you.

GPS technology is the state-of-the-art tracking.

This technology allows us to track whatever you can image, such as:

- Persons: children, the elderly, Alzheimer’s patients.
- Teenager drivers
- Personal vehicles
- Company vehicles
- Watercraft
- Cargo or merchandise

Call us for more details on applications, leases and full service monitoring.
